

Communications Solutions Group Engineering Rotation Program

The Keysight Communications Solutions Group (CSG) program for new engineering graduates (Bachelor & Master degrees) helps you develop a strong foundation of technical skills on products and applications within CSG, explore various roles within Keysight, and contribute to the growth of Keysight through rotational assignments in our industry solution, product development and marketing teams.

In this two-year program, you'll work with the latest technologies in a broad range of applications including 5G, satellite signal monitoring, connected cars and more. At the conclusion of the 2-year program, you'll move into a role that interests you and fulfills a business need.

Key Responsibilities

There are two phases to the program, both lasting about one year each. Responsibilities vary by phase:

Phase I: Develop Technical Baseline & Deep Product Knowledge

During this phase, you will:

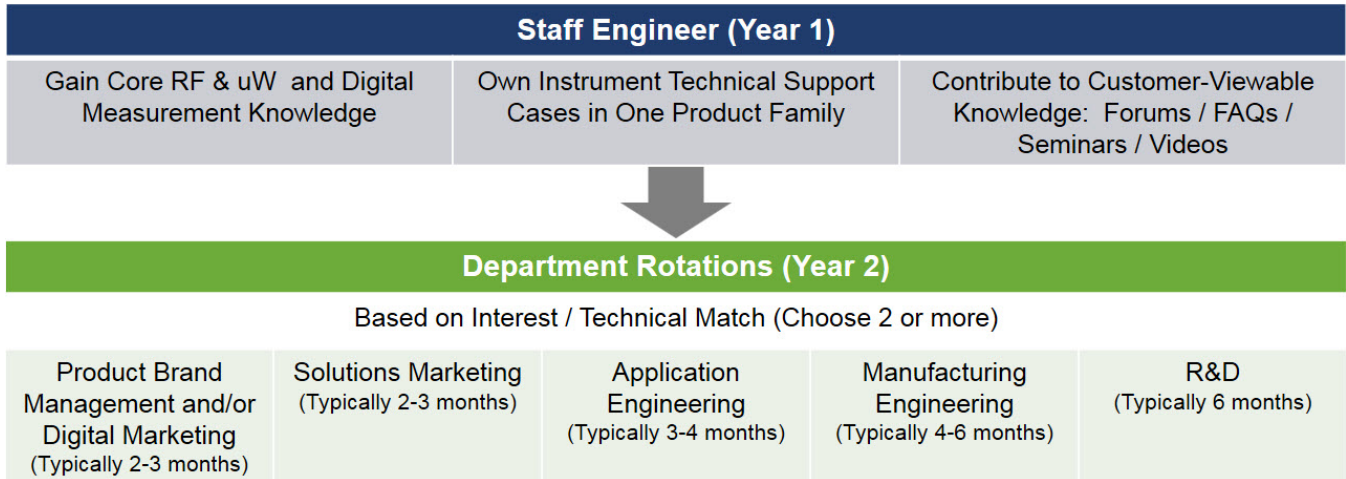

- learn all about Keysight and the different technical and business roles in the company while building core technical skills that will benefit you throughout your career at Keysight
- participate in training classes, contribute to blogs, develop and deliver sales tools that describe technical advantages of Keysight test equipment
- gain technical expertise on assigned products and develop business acumen as you work directly with our field organization, answering technical questions on one or more products in a product family
- work with a Product Brand Specialist to develop competitive comparisons at the instrument level
- work with a master level engineer to write one or more technical articles for on-line publishing

Phase II: Application, Product Development & Marketing Rotations

During this phase, you will rotate into different departments for 3 to 6 month long projects to:

- continue to grow your product expertise through new product development
- begin gaining industry and domain knowledge in specific industry focused application areas and/or engage in marketing activities, including digital marketing techniques
- work with experts in various roles throughout CSG as you own and deliver on your assigned projects. Project assignments are matched based on business need and your interests for further development.

At the conclusion of this phase, you will move into a role, typically in one of the departments you had a rotational assignment in, based on your interest and business need.

Qualifications

- Bachelor or Master's Degree in Electrical Engineering, Computer Engineering or Mechanical Engineering, at an accredited 4-year university
- Strong foundation in engineering principals.
- Comfortable in the dynamic atmosphere of a technical organization
- Strong presentation skills
- Organized, analytical, and able to eliminate obstacles through creative and adaptive approaches
- Excellent written and verbal communication skills.
- Great initiative, sense of ownership, and sound decision making.
- Some travel (domestic and international) will be required.
